

DecoCheckStateCustomer.On
ConditionCheck

DecoNullCheckTargetOrder
FoodCustomer.OnConditionCheck

BaseCustomerDecorator.Get
CustomerData

```
graph LR; A[DecoCheckStateCustomer.OnConditionCheck] --> C[BaseCustomerDecorator.GetCustomerData]; B[DecoNullCheckTargetOrderFoodCustomer.OnConditionCheck] --> C;
```

The diagram illustrates the Decorator pattern. On the left, there are two white boxes representing decorator classes. The top box contains the text 'DecoCheckStateCustomer.OnConditionCheck'. The bottom box contains the text 'DecoNullCheckTargetOrder' followed by 'FoodCustomer.OnConditionCheck' on a new line. On the right, there is a gray box representing the base decorator class, containing the text 'BaseCustomerDecorator.Get' followed by 'CustomerData' on a new line. Two blue arrows point from the right side of each white box to the left side of the gray box, indicating that both decorator classes delegate the 'OnConditionCheck' call to the 'GetCustomerData' method of the 'BaseCustomerDecorator'.
